GENERAL INFORMATION:

APPLICANT: BURGOYNE, LEIGH A.

TITLE OF INVENTION: METHODS AND MATERIALS FOR DETECTING GENETIC MATERIAL

FILE REFERENCE: 45858-56064

CURRENT APPLICATION NUMBER: US/11/016,291

CURRENT PILING DATE: 2004-12-17

PRIOR FILING DATE: 2001-11-15

NUMBER OF SEQ ID NOS: 7

TITLE OF INVENTION: OLIGONUCLEOTIDES SPECIFIC FOR TITLE OF INVENTION: HEPATITIS C VIRUS
NUMBER OF SEQUENCES: 172
CORRESPONDENCE ADDRESSE:
ADDRESSEE: Hale and Dorr LLP
STREET: 60 State Street
            COMPOURE: IBM PC compatible
COMPOURE: IBM PC compatible
SOSTAME: Batentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/887,505
FILING DATE:
CLASSIFICATION: 514
PRIOR APPLICATION NUMBER: US 08/471,968
FILING DATE: O6-JUN-1995
ATTORNEY/AGENT INFORMATION:
NAME: Kerner, Ann-Louise
REGISTRATION NUMBER: HYZ-040CIP
TELECOMMUNICATION INFORMATION:
TELEPHONE: (617) 526-6000
TELEPHONE: (617) 526-6000
INFORMATION FOR SEQ ID NO: 53:
SEQUENCE CHARACTERISTICS:
LENGTH: 18 base pairs
TYPE: nucleic acid
TYPE: MODELOCKET SINGLE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SOFTWARE: Patentin Release #1.0, Version #1.30

TITLE OF INVENTION: RNA Interference Mediated Inhibition of Hepatitis C Virus (HCV)
TITLE OF INVENTION: Gene Expression Using Short Interfering Nucleic Acid (sinA)
FILE REFERENCE: 400/129 (MBHB02-763B)
CURRENT APPLICATION NUMBER: US/10/667,271
CURRENT FILING DATE: 2003-09-16
PRIOR FILING DATE: 2003-05-23
PRIOR FILING DATE: 2003-05-23
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ; OTHER INFORMATION: Description of Artificial Sequence: sinA antisense region US-10-667-271-1163
